PLASTIC LAMINATE MATERIALS SAFETY INFORMATION

Fimar Engraving does not use any materials or engrave any materials that contain phenolic, formaldehyde or PVC plastics.

Phenolic and formaldehyde materials (Traffolyte, Bakelite) are Phenol formaldehyde resins (PF) and are classed as dangerous materials and have acute toxicity.

Polyvinyl chloride materials (PVC) are also dangerous when burnt as they produce dioxins which are very harmful.

The plastic laminate materials used at Fimar Engraving are acrylic materials and these are non-toxic as safe to engrave.
